

GENERAL NOTES (Drawn 1/3 F-135-104 thru F-135-106 incl)

1) The majority of drop inlets located throughout the village are connected laterally to the sewer conduits. Therefore, the exact location, size and nature of the conduits cannot be observed without excavation.

2) Streets and buildings taken from existing topographic survey maps.

3) All elevations shown (either on drawings or in detail books) are from actual field survey and are on USGS datum.
